

Milad Farazian

Full-Stack Software Engineer

Los Angeles, CA | (818) 447-9511 | miladfarazian@gmail.com | <https://farazian.com> | <https://linkedin.com/in/miladfarazian> | <https://github.com/miladfarazian>

EXPERIENCE

Lead Full-Stack Software Engineer & CTO

Sep 2025 - Present

Parkzy | Los Angeles, CA

- Launched Parkzy from zero to a live App Store product (4.9★, 2,400+ downloads) as sole engineer: React 18/TypeScript/Supabase across web, iOS, and Android via Capacitor, 490 SQL migrations, and 3,989 commits in the first year
- Designed the real-time 'ping' dispatch system, where one tap fans out to nearby hosts who accept from the lock screen, and lifted acceptance from 16% to 45% while cutting expiry from 70% to 36% through instrumented lifecycle fixes
- Defined three production SLOs and wired burn-rate alerts into Slack, backed by Prometheus and Grafana dashboards and an on-call runbook, then moved the pricing service onto Kubernetes where an HPA scaled it from 1 to 5 pods under 754 requests per second
- Assembled an internal-docs RAG pipeline that answers with citations from pgvector retrieval, then measured it against a golden set: 0.97 hit@8 in 47 ms, 0.93 judged faithfulness, and correct refusal on questions the corpus cannot answer

Lead Full-Stack Software Engineer & CTO

Dec 2024 - Aug 2025

StudyBuddy | Los Angeles, CA

- Led a 5-person team building StudyBuddy, a tutoring marketplace for USC students, on React/TypeScript with a Supabase (Postgres) backend, covering booking and scheduling, Stripe Connect payments, and Zoom-integrated sessions across tutor, student, and admin roles
- Layered a GraphQL gateway over Postgres and Stripe Connect with per-request DataLoader batching and depth limits, cutting a representative nested query from 121 database round trips to 4, constant as the result set grows
- Implemented university sign-on on OAuth 2.0 with PKCE plus a scraper that ingested each semester's course catalog, and made it usable with a screen reader and at high zoom (WCAG 2.1 AA), fixing all 7 failing pages

Software Engineer II (Full-Stack)

Feb 2022 - May 2023

Walmart | Sunnyvale, CA

- Developed 10+ features for Converse Self Serve, Walmart's Dialogflow conversational-AI platform behind 66M+ AI-assisted customer contacts
- Collaborated with a 4-person US/India team on a push-notification API for Walmart's Last Mile Delivery servers (4,700 stores, 90% of the US)
- Instrumented a CSAT feedback system that collected 6M+ customer ratings by March 2022

PROJECTS

Azadi: job-pipeline system with a learned ranking model

Python, Node.js, headless Chrome, TF-IDF + logistic regression

- Built a pipeline that sweeps 485 organization ATS boards on authoritative posting dates, scores each role against a rubric, and enforces gates blocking stale postings and unverifiable resume claims across 660 tracked roles
- Trained a pure-stdlib TF-IDF and logistic-regression ranker on 618 labeled decisions, then ran a 5-fold cross-validated ablation showing the source board (AUC 0.705) predicts pursuit far better than the fit score (0.548)

Gosan: native macOS DAW with an AI taste engine

Swift, SwiftUI, AVAudioEngine, CoreMIDI, AudioUnit

- Engineered a native macOS DAW in ~10 days (~11,300 LOC): multitrack recording, MIDI, AudioUnit hosting, mixer, and WAV export
- Profiled the real signal chain with a purpose-built benchmark harness, surfacing three latent defects: missing plugin delay compensation shifting tracks 256 samples out of alignment, MIDI a median 5.3 ms late, and a heap allocation in the render callback

EDUCATION

University of Southern California - M.S. Computer Science, Artificial Intelligence

Aug 2023 - May 2025

Los Angeles, CA

- *Coursework: Applied Natural Language Processing, Fundamentals of Artificial Intelligence*
- *Expat Society · Persian Student Organization · Association for Computing Machinery (ACM)*

University of California, Santa Cruz - B.S. Computer Science, Minor in Economics

Sep 2018 - Dec 2021

Santa Cruz, CA

- *Coursework: Data Structures & Algorithms (C/Java), Artificial Intelligence (Python/SQL)*
- *Solution Challenge Coordinator for Google's Developer Student Club · Iranian Student Union*

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Python, React, Node.js, Next.js, Swift/SwiftUI, Capacitor (iOS/Android)

AI/ML: LLM APIs (Claude/Anthropic, OpenAI), RAG (pgvector retrieval, eval harnesses), Vector embeddings, PyTorch, scikit-learn

Infrastructure & Data: Postgres/Supabase, Serverless (Deno), Kubernetes (Helm, HPA), Kafka, Redis, AWS (RDS, Lambda, API Gateway), Terraform, Docker, CI/CD (GitHub Actions), Prometheus/Grafana, Sentry, PostHog, dbt/BigQuery

Interests: Surfing, Weightlifting, Mixed Martial Arts, Dancing, Producing Music, Graphic Design, Reading, US History
